

Fellow delegates,

Since the health and technology landscape is changing every day, from the WHO committee we wanted to introduce you to a brief update on the Study Guide.

There is nothing new in the fact that our planet is under an extreme health situation due to the COVID-19 pandemic. For this reason, one of the most current topics that should be addressed in our committee sessions must be the pandemic control and monitoring.

However, as this committee is taking place in 2030, the Chairs of the committee have considered that this pandemic situation will have already been solved. Therefore, we would like to introduce the COVID-19 topic in a different way, focusing on the prevention of possible future pandemics rather than the current Coronavirus management itself.

As delegates, we would like you to make an extra effort, and explore new proposals in which AI and technological advances might help us handle future pandemics and diseases. For instance, tracking how a new infectious disease is spreading around the globe, or helping us collect and gather different symptoms and data of various patients in a short amount of time.

We are excited to hear the new ideas and proposals your delegation comes up with. If you have any questions, do not hesitate to contact us via email.

Alba & Jaume
